

Week ending 10 July 2026

In this week's edition...

Project Milestones Summary	2
Coal miner Idemitsu to go with the vanadium flow for catalyst project	3
Fast-track approval advances Mercury's next stage in renewable energy build.....	4
Another new wind farm project joins the Squadron	4
Small solar farm with Amazon PPA is approved	5
Perth Airport partners with AGL on solar farm.....	5
OX2 acquires the Corop Solar Farm and Battery Project in Victoria	6
Potentia Energy sees Mologa solar and BESS potential	6
BESS up, wind down at Whyte Yarcowie Wind Farm	7
Bungama West BESS clears its final grid hurdle — construction-ready and open for acquisition	7
Hydro Tasmania enters new financial year with highest July storage levels in over a decade	8
Big BESS part of Yallourn Power Station's future outlook	8
AER ensures continued supply for former ZEN Energy customers.....	9
Two days. Two major milestones.	9
Greensteel Australia's \$500M investment returns steelmaking to the NSW Hunter Region	10
PROJECT UPDATE: Goombi Renewable Energy Hub, QLD	10
Driving better community engagement and benefits from renewable energy project developers	11
GameChange Energy awarded 380 MWp tracker order in Australia	11
Morrison to be Sumitomo Mitsui Trust Bank's preferred global infrastructure manager	12
Queensland Government would raise power prices and pollution with data centre gamble	12
Statement from Councillor Alvaro Charry - Yass Valley Council	13
New owner for St Patricks Plains Wind Farm	13
Australian-first battery in Gippsland.....	14

Project Milestones Summary

Significant changes in project status in the AltEnergy database over the last seven days...

Project	Status	State	Developer/Owner	Short description
Hunter Vanadium Flow Battery	Proposed; added to database	NSW	Idemitsu Australia	108 MW / 864 MWh AC BESS to be located on a disused coal mine site near Muswellbrook.
Banandra Wind Farm	Proposed; added to database	NSW	Squadron Energy	~558 MW, up to 93-turbine to be located near Darlington Poin.
Mahinerangi Wind Farm Stage 2	Approved	NZ	Mercury	Up to 44-turbine 190 MW project, also called Puke Kapo Hau Wind Farm, in Otago.
Stanbridge Solar Farm	Approved	NSW	ANZA Power	5 MW AC / 8 MW DC solar fam plus 10 MWh BESS in the central Riverina region.
Mologa Solar Hybrid	Proposed; added to database	VIC	Potentia Energy	250 MW solar & 250 MW / 1000 MWh BESS located N of Bendigo.
Perth Airport Solar Farm	FID / Under construction	WA	Perth Airport	AGL to design and construct a 4.545 MW solar farm on the Perth Airport Estate.
Dartmoor Energy Storage Project	Proposed; added to database	SA	ZEBRE Energy	144 MW / 576 MWh BESS located near Bunday Sub-station.
Yallourn Energy Security Precinct	Proposed; added to database	VIC	EnergyAustralia	Potential for up to 2.7 GW BESS as part of repurposed Yallourn Power Station.
Goombi Renewable Energy Hub	Being assessed by state planning authority	QLD	LP Renewables / TagEnergy	800 MW wind & 800 MW / 3200 MWh BESS located ~20km E of Miles in the Western Downs.
SEC Compressed Air Battery	Proposed; added to database	VIC	SEC Victoria	SEC CAB will be a 20 MW closed-loop, compressed CO2 battery in Hazelwood North.

Coal miner Idemitsu to go with the vanadium flow for catalyst project

Idemitsu Australia is taking a different approach to most for a planned utility-scale battery project in the Hunter region by opting for vanadium flow technology.

The minimum 108 MW / 864 MWh AC **Hunter Vanadium Flow Battery** is being developed on a site in Muswellbrook, in the Muswellbrook Shire Council LGA and within the Hunter-Central Coast REZ.

The project will connect to Ausgrid's 132kV Sandy Creek Sub-station via one of two identified transmission corridor alignments.

The project area covers approximately 44 hectares of mining-impacted land owned by Muswellbrook Coal Company, a wholly-owned subsidiary of Idemitsu Australia.

Mining operations at Muswellbrook Coal Mine stopped in 2022 and the site has undergone rehabilitation.

In consultation and collaboration with Muswellbrook Shire Council and key industry partners, Idemitsu developed a post-mining plan “to investigate the viability of and plan for a wide range of renewable energy and other projects, on and around the Muswellbrook site”.

Now referred to as the Muswellbrook Clean Industries Precinct, the plan includes using the coal mine void as part of the Muswellbrook Pumped Hydro

Energy Storage Project and the under-construction Muswellbrook Solar Farm being developed by OX2.

Idemitsu plans to build on that platform by adding a grid-scale long-duration BESS and selected vanadium redox flow battery technology.

One of the reasons to use vanadium flow batteries was “a catalyst project which will support Australian manufacturing and demonstrate the technology’s readiness for the broader market adoption”.

In alignment with the federal government’s Future Made in Australia program, Idemitsu plans to use a vanadium electrolyte that is manufactured in Australia, and said opportunities to bring battery manufacturing to Australia will be explored.

A Scoping Report for the Hunter Vanadium Flow Battery project is being assessed by the state planning authority.

Fast-track approval advances Mercury's next stage in renewable energy build

3 July

Mercury welcomes Fast-track approval to develop Puke Kapo Hau Wind Farm (**Mahinerangi Wind Farm, stage 2**) in Otago.

Puke Kapo Hau will comprise up to 44 turbines, with an installed capacity of up to 190MW.

It will generate about 550GWh per year; enough to power the equivalent of about 78,000 average homes.

Mercury's Executive GM, Generation Development, Matt Tolcher, said the Fast-track process took nine months to complete from submitting the application, to notification of the Expert Consenting Panel's decision.

"We would like to thank everyone who took the time to consider the application, make a submission, and ask questions about our plan for the wind farm.

"We appreciate the feedback and opportunity to work with all of the stakeholders involved in the Fast-track process.

"We also want to recognise the constructive engagement between Mercury and Tē Rūnanga o Ōtākou, and their support for the proposal."

The full announcement is available at: <https://www.mercury.co.nz/investors/news>

NEW PROJECT

Another new wind farm project joins the Squadron

Squadron Energy adds to its already substantial wind farm development portfolio with the Banandra Wind Farm to be located near Darlington Point in NSW, approximately 40km south of Griffith and 30km west of Narrandera within the Murrumbidgee and Narrandera LGAs.

The approximately 558 MW **Banandra Wind Farm** will consist of up to 93 wind turbine generators, a sub-station including a switching station, and associated ancillary and temporary infrastructure.

Grid connection is planned via a direct connection to the existing 330kV Darlington Point to Wagga Wagga transmission line.

The proposed project site covers 11,707 hectares which includes a development corridor of 3336ha.

At this stage construction is estimated to start in 2030 and be completed in a single stage of development. A peak workforce of around 600 fulltime equivalent positions is expected to be required.

A Scoping Report for the Banandra Wind Farm is being assessed by the state planning authority.

Small solar farm with Amazon PPA is approved

ANZA Power's **Stanbridge Solar Farm**, to be built on an approximately 21.7-hectare site in the central Riverina region of NSW, has been approved by the state planning authority.

The sub-5 MW AC / 8 MW DC solar farm plus 10 MWh DC-coupled BESS will comprise installation of 13,272 solar photovoltaic panels to be mounted in arrays on single axis trackers, cabling from the solar arrays to panel inverters and sub-station, and connection into the local electricity network from the centre of the development area.

There is good access to the existing electrical transmission network.

Construction is expected to take approximately three months to complete with an estimated 50 workers employed spread out over different times dependant on the stage.

The project, originally developed by Bison Energy, was awarded a PPA by Amazon Australia in April this year.

Perth Airport partners with AGL on solar farm

3 July

Perth Airport has partnered with AGL to design and construct a 4.545 MW solar farm on the Perth Airport Estate.

The new development will mark a significant step forward in **Perth Airport's** commitment to achieving Net Zero by 2032.

Perth Airport's CEO Jason Waters said the development of this project forms a major part of our energy strategy, which outlines the potential pathway to develop commercial, economic energy systems that support sustainable growth.

"By 2046 we will be facilitating 30 million passengers, generating 75,400 jobs, and contributing \$17 billion to the State's economy annually, so as a growing airport, incorporating sustainable initiatives will be a critical component of our operations.

"Our first solar farm will produce an estimated annual energy yield of over 10 GWh (gigawatt hours) and will complement other energy systems such as the electrification of vehicle and equipment fleets, expansion of rooftop solar systems and future additional solar farms on the estate.

"The new solar farm will integrate into our existing 22 kV network and supports our goal to reach 50 per cent renewable energy consumption across the estate, reducing our Scope 2 emissions.

Source: Perth Airport

<https://www.perthairport.com.au/home/corporate/articles/2026/07/03/07/58/perth-airport-partners-with-agl-on-solar-farm>

OX2 acquires the Corop Solar Farm and Battery Project in Victoria

6 July

We're pleased to announce OX2 has acquired the **Corop Solar Farm** and Battery Project in Victoria further strengthening our growing presence in Australia's renewable energy market.

Located near Rushworth and Stanhope, Corop is a late-stage hybrid development combining:

- 230 MWac of solar generation
- 290 MW / up to 4 hours of battery energy storage

Together, they'll deliver both clean power and greater grid reliability for Victoria.

Project status:

- Key development approvals secured
- Well advanced in the grid connection process
- Awarded a contract under the Commonwealth's Capacity Investment Scheme

The acquisition continues to build on OX2's current development portfolio in Australia, with Corop set to become the second project the company will own and operate, following Muswellbrook Solar Farm and BESS in NSW, which reached financial close earlier this year and is now under construction.

"The acquisition of Corop is a significant milestone for OX2 in Australia. It builds on the momentum we've established with Muswellbrook and reinforces our commitment to delivering high-quality, reliable renewable energy projects as part of the country's energy transition," says Steve Symons, Vice President, Australia

We look forward to working closely with local communities, Traditional Owners, stakeholders, and industry partners as we continue delivering projects that support Australia's energy transition.

Source: OX2

NEW PROJECT

Potentia Energy sees Mologa solar and BESS potential

An application for environmental approvals for the **Mologa Solar Hybrid** project is being assessed by the federal environmental regulator under the EPBC Act.

The project site is located in Mologa, approximately 65km north of Bendigo and 195km north-west of Melbourne within the Loddon Shire LGA, in the Loddon Mallee Region of Victoria.

Being developed by Potentia Energy, the proposal includes a 250 MW solar farm, a 250 MW / 1000 MWh Battery Energy Storage System (BESS), and an on-site substation – the Mologa Terminal station - which will connect into the existing overhead 220kV transmission line between Kerang Terminal Station and Bendigo Terminal Station.

More specifically the project will consist of approximately 500,000 PV panels mounted on tracking frames, approximately 76 power conversion units distributed throughout the panel array, and approximately 272 containerised battery units and 68 inverters.

The construction phase of the Mologa Hybrid Solar project is anticipated to start in 2028 and take between 18 to 24 months.

BESS up, wind down at Whyte Yarcowie Wind Farm

Plans for the **Whyte Yarcowie Wind Farm** in South Australia have been revised following the public exhibition of the project's Renewable Energy Infrastructure Licence application in April–June last year and feedback from community members and government agencies.

Co-developers Wind Prospect and EDF Australia are now proposing a down-scaled project of up to 47 wind turbines equating to approximately 280 MW of generation capacity, from the originally proposed 83-turbine, approximately 600 MW proposal.

The updated project design considers “the realities of the South Australian energy market”.

Wind Prospect and EDL plan to soon submit formal responses to public submissions made on the REIL application to be considered in the state planning authority's decision-making process in late 2026.

Community information sessions are planned this month to discuss the changes and introduce the project's proposed transmission line and Battery Energy Storage System.

Feasibility studies confirmed a battery of approximately 270 MW / 2160 MWh capacity can be integrated into the wind farm at a site near the Belalie sub-station. The battery and wind farm would each have their own grid connection at the Belalie sub-station and operate independently.

The proposed Whyte Yarcowie Wind Farm is located 4km south-east of the Whyte Yarcowie township and 190km north of Adelaide in the northern Mount Lofty ranges of South Australia.

In May the project was announced as a successful applicant in the federal government's Capacity Investment Scheme (CIS) Tender 7.

Bungama West BESS clears its final grid hurdle — construction-ready and open for acquisition

6 July

Risen Energy Australia's 200 MW / 400 MWh **Bungama West** Battery Energy Storage System, located near Port Pirie in South Australia, has received the formal Section 5.3.4A clearance letter from the Australian Energy Market Operator (AEMO), issued through ElectraNet — South Australia's transmission network service provider.

The letter confirms that all Generator Performance Standard (GPS) due diligence, stability assessments and negotiated access standard approvals required under the National Electricity Rules have been formally accepted. ElectraNet is now positioned to issue an Offer to Connect, paving the way for execution of a Transmission Connection Agreement (TCA) and construction start.

Parties wishing to discuss the Bungama West BESS opportunity — including full project acquisition, co-development partnerships or financial investment structures — are invited to contact: Qiao Nan Han, CEO, Risen Energy Australia qiao.han@risenenergy.com.au

The full announcement is available at: <https://risenenergy.com.au/news/bungama-west-bess-534a-clearance/>

Hydro Tasmania enters new financial year with highest July storage levels in over a decade

6 July

Hydro Tasmania has entered the new financial year with water storages at their highest levels for the start of July since 2012, providing a strong foundation for Tasmania's energy security and flexibility.

Despite recently going through two of the driest years on record, the total energy in storage across Hydro Tasmania's dams is sitting at 42%. This is well above the thresholds required for energy security* and levels are expected to rise further during the wet Spring months.

It comes as Basslink transitioned to a regulated interconnector on 1 July, creating greater certainty for Tasmania and supporting Hydro Tasmania's ability to continue delivering value for the state.

Hydro Tasmania CEO Rachel Watson said the result reflected careful and disciplined water management across one of Australia's most complex integrated water and energy systems.

"Achieving this has required very careful management of Tasmania's water resources, balancing the needs of electricity generation with the many other important ways water is used across the state.

"Our storages are a strategic asset for Tasmania, especially as the value of long-duration storages and flexible energy capacity continues to rise," said Ms Watson.

Hydro Tasmania manages a vast network of lakes, dams and waterways that support a range of stakeholders and communities in Tasmania.

Source: Hydro Tasmania

The full announcement is available at: <https://www.hydro.com.au/articles/media-releases/hydro-tasmania-enters-new-financial-year-highest-july-storage-levels-over>

NEW PROJECT

Big BESS part of Yallourn Power Station's future outlook

EnergyAustralia is hosting community information sessions this month for its proposed Yallourn Energy Security Precinct project.

The gentailer is preparing to repurpose its Yallourn Power Station in Victoria's Latrobe Valley which is expected to close in 2028.

The **Yallourn Energy Security Precinct** involves potential for up to 2.7 GW of new utility-scale battery storage, 300 MW of gas-power generation near the existing Yallourn 'W' Power Station, and hosting new data centre capacity supplied with energy from the site.

These projects could use the existing grid connections, gas pipelines and skilled workforce already operating at Yallourn.

The Yallourn Power Station site covers more than 5500 hectares.

AER ensures continued supply for former ZEN Energy customers

6 July

The Australian Energy Regulator (AER) has initiated the Retailer of Last Resort process that will allow for the transfer of customers from electricity retailer ZEN Energy Retail Pty Ltd (ZEN Energy) to ensure the continued supply of essential energy services to these customers.

The AER applied the market safeguard after administrators were appointed to ZEN Energy.

ZEN Energy's authorisation to retail electricity will be halted at 24:00 hours Australian Eastern Standard Time, Monday 6 July 2026 (that is, midnight Monday evening). ZEN Energy is an electricity retailer who currently supplies large customers in South Australia, New South Wales, Queensland, Victoria and the Australian Capital Territory.

Customers are not required to take any immediate action.

Under the Retailer of Last Resort process, customers will be transferred to another retailer, who will contact them directly to explain the new arrangements.

Source: AER

The full announcement is available at: <https://www.aer.gov.au/news/articles/communications/aer-ensures-continued-supply-former-zen-energy-customers>

PROJECT UPDATE

Two days. Two major milestones.

7 July

Yesterday, PGS and Karara Mining (Ansteel) signed the Heads of Terms for the long-term Power Purchase Agreement (PPA) for the **Three Springs Renewable Energy Project**.

Today, the WA Development Assessment Panel (DAP) unanimously approved PGS' plans for this Renewable Energy Project at Three Springs.

These back-to-back achievements mark significant progress toward delivering one of the largest industrial decarbonisation initiatives on the South West Interconnected System (SWIS).

A heartfelt thank you to the WA Development Assessment Panel and the Shire of Three Springs for their unanimous support and confidence in this project. We couldn't have achieved this without the hardworking PGS teams and our specialist consultants including TBB Planning and GHD.

Special thanks to our trusted partner, Karara Mining, particularly CEO Mr. Dong Ma and his outstanding team, for their vision, collaboration, and commitment to making this project a reality. Together, we are taking another important step toward enabling Green Iron production and reducing Scope 3 emissions to near zero—demonstrating how renewable energy and industry can work together to accelerate Australia's net-zero future.

This is just the beginning. We look forward to working with our partners, stakeholders, and communities to bring this landmark project to life.

Greensteel Australia's \$500M investment returns steelmaking to the NSW Hunter Region

7 July

- Greensteel Australia's \$500M Investment Returns Steelmaking to the NSW Hunter Region
- Australia's first new steel mill in over 30 years signals the return of domestic manufacturing
- \$500m all-electric mill is expected to be operational by January 2028, with Stage 2 plans to be announced in the coming weeks.

Greensteel Australia today announced it has secured the historic 70,000 square metre site at 51 Industrial Drive, Mayfield North, and will invest \$500 million to build Australia's first new steel mill in more than 30 years. The mill will be the first in the country to run entirely on electricity, with no gas used anywhere in the process.

The Greensteel Australia site was home to the BHP Newcastle Steelworks for most of the twentieth century. Greensteel Australia's investment will return steel manufacturing to the Hunter region.

Greensteel Australia Head of Government Relations, Patrick Buchan, said "The investment was made possible by the recent policy directions set by the NSW and Federal Governments. The Future Made in Australia agenda, together with national and state housing targets and NSW's support for industry in the Hunter, has given us the certainty we need to manufacture steel in Australia rather than overseas."

"Australia stopped building steel mills a generation ago. Thanks to the leadership of the NSW and Federal Governments, we're building again," Greensteel Australia Chief Executive Officer Romany Ibrahim said. "They've made it possible to bring manufacturing home to Newcastle, where Australian steelmaking began and where it never should have left."

Source: GreenSteel Australia

The full announcement is available at: <https://h2greensteel.com.au/greensteel-500m-returns-steelmaking-to-hunter/>

PROJECT UPDATE: Goombi Renewable Energy Hub, QLD

We are happy to announce that the Development Application for the **Goombi** Wind Farm has been submitted for assessment by the Queensland Government.

The submission comes following years of planning work, environmental assessment and extensive community engagement. The project recently executed a Community Benefits Agreement with the Western Downs Regional Council which will deliver over \$30m of local benefits during the project's life.

Goombi demonstrates how large-scale renewable energy projects can be thoughtfully planned to co-exist with the primary production and established resource industries that are critical to the Western Downs region.

Thanks to all who have contributed to the project to date, and we look forward to working together through the assessment process.

Driving better community engagement and benefits from renewable energy project developers

7 July

- Setting clear expectations for how renewable energy project developers engage with and deliver economic benefits for communities.

The Victorian Government has released the Community Engagement and Social Value Guidelines, setting clear expectations for how renewable energy developers engage with communities and deliver local benefits.

The guidelines contain 43 expectations that all developers will need to meet if they want to connect to the grid in Victoria.

Developers are expected to:

- engage early and meaningfully with host landholders, neighbouring and nearby landholders, communities and Traditional Owners
- consider feedback from these groups when designing their projects
- support local economic investment and deliver community benefits, while recognising impacts on communities
- establish clear processes for complaints and dispute resolution.

Source: VicGrid

The full announcement is available at: <https://www.vicgrid.com.au/about/news/news-stories/driving-better-community-engagement-and-benefits-from-renewable-energy-projects>

GameChange Energy awarded 380 MWp tracker order in Australia

7 July

GameChange Energy, a global provider of renewable energy infrastructure solutions, today announced that it has been selected to supply its Genius Tracker™ 1P Terrain Following system for the 380 MWp **Lower Wonga Solar Farm** in Australia. The project is being developed by Lightsource bp, with INTEC Energy Solutions as the EPC partner.

Located in Queensland, the project will deploy GameChange Energy's Genius Tracker™ 1P Terrain Following system, selected for its ability to adapt to challenging terrain, minimize earth grading requirements, support efficient construction, and deliver reliable long-term performance. This project will also implement GameChange Energy's industry-leading HailStow and MaxGen technologies, combining autonomous stow functionality with advanced tracker optimization designed to maximize energy generation.

Source: GameChange Solar

The full announcement is available at: <https://www.gamechangeenergy.com/news/gamechange-energy-awarded-380-mwp-tracker-order-in-australia>

Morrison to be Sumitomo Mitsui Trust Bank's preferred global infrastructure manager

7 July

Morrison, a leading global infrastructure investment manager has reached an agreement with Sumitomo Mitsui Trust Bank, Limited ("SuMiTB"), Japan's leading trust bank, to be its preferred global infrastructure manager as part of a ~US\$2.0 billion+ long-term strategic partnership.

Under the partnership, SuMiTB will make an initial US\$500 million commitment into Morrison's global private market Core Plus and Value-add strategies, as the first step in facilitating the deployment of broad-based Japanese capital into high-quality infrastructure opportunities worldwide.

SuMiTB and Morrison have also agreed a US\$1.5 billion+ long-term collaboration agreement which will include raising third-party capital for each other's infrastructure investment products in their home markets, as well as the development of new infrastructure investment products for Japanese and global investors.

In addition to the broader partnership, SuMiTB will subscribe for new equity in Morrison resulting in a 15% ownership stake. This primary equity issuance will provide growth capital to accelerate Morrison's global expansion.

Source: Morrison

The full announcement is available at: <https://morrisonglobal.com/news-insights/morrison-to-be-sumitomo-mitsui-trust-banks-preferred-global-infrastructure-manager/>

Queensland Government would raise power prices and pollution with data centre gamble

8 July

A Queensland Government push to allow data centres to expand without renewable energy requirements would raise wholesale power prices by 14 per cent.

The Climate Council 'Clouded Future' report shows that without appropriate requirements for data centres to power their growth with renewable energy, wholesale power prices will rise by up to 26 per cent in NSW, 23 per cent in Victoria and 14 per cent in Queensland by 2035.

The report also shows that without intervention, data centre electricity demand will raise climate pollution levels, putting Queenslanders and other Australians already facing the devastating impacts of worsening floods, fires and extreme weather events at further risk.

A push by the Queensland Government to abandon a call by all other state and federal energy ministers for national regulation of renewable energy requirements for the data centres boom would fuel rising energy prices and climate risks.

Source: Climate Council

The full announcement is available at: <https://www.climatecouncil.org.au/resources/queensland-government-pollution-data-centre-gamble/>

Statement from Councillor Alvaro Charry - Yass Valley Council

Tonight I attended the Rye Park Community Consultative Committee (CCC) meeting as Yass Valley Council's representative.

During the meeting, representatives from Tilt Renewables advised the CCC that 20 wedge-tailed eagles have been killed by wind turbines at the Rye Park Wind Farm over the past 18 months.

I found this deeply saddening and concerning.

The wedge-tailed eagle is one of our nation's most iconic native birds. It also holds profound cultural significance as the sacred totem of the Ngunnawal People. To hear that so many of these majestic birds have been lost is distressing and raises important questions about how these impacts are being managed and mitigated.

In response to this report, the CCC requested that Tilt Renewables provide a comprehensive report at our next meeting in October, including:

- Statistics for all recorded bird and bat strike incidents across the wind farm.
- Details of the mitigation measures currently in place, and any additional strategies being considered to reduce wildlife mortality.
- An outline of the reporting obligations to the NSW Government, including how these incidents are monitored, recorded and reported.

Renewable energy projects are an important part of Australia's diversified energy future, but that goal must be pursued responsibly. Protecting biodiversity and respecting our cultural and environmental heritage must remain central to how these projects are planned, operated and continually improved.

I will continue to keep Yass Valley residents informed once the report is provided in October.

New owner for St Patricks Plains Wind Farm

10 July

Ark Energy is pleased to announce the successful handover of the **St Patricks Plains Wind Farm**, approved for the Central Highlands region of Tasmania, to new owner Vestas Development Australia.

Following eight years of planning and environmental approvals, originally by renewable developer Epuron and later Ark Energy's development team, this critical milestone paves the way for construction of the 47 wind turbine project, which is slated to commence next year.

The project was approved by the Tasmanian Civil and Administrative Tribunal in September 2025, after an appeal to the planning permit issued by Central Highlands Council in July 2024. It was approved by the Australian Department of Climate Change, Energy, the Environment and Water under the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 in December 2025.

Over the course of its development the project's layout was revised several times based on findings from eagle utilisation and environmental surveys, technical studies and community feedback, and reduced from an initial 67 wind turbines to a final layout of up to 47 wind turbines.

Environmental and social commitments include installation of industry-leading curtailment technology to protect eagles, a Neighbour Benefit Program and significant community benefit funding for the life of the project.

“Handing the project over to the company that will take it to the next stage of development is an exciting moment for Ark Energy, the St Patricks Plains Wind Farm and for Tasmania,” said Ark Energy’s General Manager Development for Tasmania, Donna Bolton.

“This comes at a time when more generation is needed for Tasmania. We are proud of the work done to secure approvals for this significant wind energy generation facility for the state. We know the jobs and investment expected to flow into local businesses and services is highly anticipated.”

In 2022, the project was the subject of a petition of support by local residents looking forward to the environmental, economic and community benefits it can deliver.

Source: Ark Energy

The full announcement is available at: <https://arkenergy.com.au/news/new-owner-for-st-patricks-plains-wind-farm/>

Australian-first battery in Gippsland

10 July

Labor is delivering an Australian-first battery in the Latrobe Valley to drive down power prices.

The SEC’s fourth project, SEC Energy Works near Morwell is a 143-hectare site that will host multiple renewable energy technologies.

These technologies will stabilise the grid and help lower power bills for Victorians.

The first project is the **SEC Compressed Air Battery** (SEC CAB), a 20-megawatt closed-loop, compressed CO2 battery.

This Australian first technology will be able to hold three times the electricity of a large-scale lithium-ion battery.

It will store cheap renewable electricity generated during the day, and release it back into the grid overnight, putting downward pressure on energy prices.

This battery will be delivered by Energy Dome and will support up to 66 jobs and the region's transition from coal.

The SEC will continue to add projects to the site, expanding renewable energy and storage in the Latrobe Valley.

Source: Victoria Government

The full announcement is available at: <https://www.premier.vic.gov.au/australian-first-battery-gippsland-1>

Highlighted projects in red are in our database at www.altenergy.com.au
