Mitsubishi HC Capital and Brookfield partner to launch renewable energy company	15
\$225 million South West REZ investment to secure NSW energy future	16
A great milestone to celebrate at Kōwhai Park solar farm.....	16
Sembcorp Industries completes acquisition of Alinta Energy	17
Cook Labor Government to help develop Collie green steel mill	17

Project Milestones Summary

Significant changes in project status in the AltEnergy database over the last seven days...

Project	Status	State	Developer/Owner	Short description
Carawatha Solar Farm	Generating	NSW	CleanPeak Energy	4.95 MW AC solar farm located ~4km from the township of Finley.
Kidston BESS	Proposed; split from wind farm project	QLD	Genex Power	200 MW / 600 MWh BESS located in Kidston Hub, northern QLD.
Red Gully BESS	Approved	WA	BLT Energy	Phase 1 400 MW / 2400 MWh BESS to be located ~105km north of Perth in the Shire of Gingin.
Good Night One Solar and Battery Storage	Proposed; added to database	QLD	InnoGreen Energy	160 MW solar & 200 MW BESS in the Wide Bay Burnett Region.
Tyrone Solar Farm	Proposed; added to database	QLD	European Energy	400 MW solar farm near Mount Alma, inland of Gladstone in northern Queensland.
Blenheim Solar Farm	Proposed; added to database	QLD	European Energy	300 MW solar & associated BESS located ~10km SW of Laidley in the Lockyer Valley.
Winton Renewable Energy Stability and Storage Terminal (WRESST)	Being assessed by state planning authority	VIC	Celero Infrastructure	400 MW / 1600 MWh BESS adjacent to Glenrowan Terminal Station, Winton.
Grahamvale BESS	Being assessed by state planning authority	VIC	Avenis Energy	480 MW / 1920 MWh BESS ~5km north-east of Shepparton CBD.
Awarua Quadrant Wind Farm	Proposed; added to database	NZ	Calder Stewart	Up to 7-turbine, 42 MW wind farm to power a new industrial park near Invercargill.
Mamaku Wind Farm	Proposed; added to database	NZ	Ventus Energy	21 X 8 MW-turbine project located south of Mamaku township.

Glenellen Solar Farm	Generating	NSW	Global Power Generation	200 MW solar farm located 16km north of Albury in southern NSW.
Bundaberg Solar Farm	Generating	QLD	Global Power Generation	93 MW project in the Bullyard area, west of Bundaberg.
Mugga Lane BESS	Generating	NSW	LGI	12MW / 24MWh BESS at Mugga Lane landfill gas power station, Canberra.
Various	Proposed; added to database			Referenced from AEMO's grid connection inquiries
Euleilah Solar Farm and Battery	Proposed; added to database	QLD	OX2	360 MW solar / 300 MW BESS across a project area of ~550 hectares, between Gladstone & Bundaberg.

Grid connection inquiry file projects to be added to Altenergy's database

At the request of some AltEnergy users we have decided to add a number of projects from AEMO's Key Connection Inquiry file into our database.

We had resisted doing this until now as many of the projects have minimal information supporting them, including a location, and many of the connection requests have been withdrawn anyway.

However we will now add the projects and fill them in when and if more information is made available, as the basic information may prove useful in terms of load on transmission infrastructure.

The projects will be added in batches over the next couple of weeks and can be found by using the Recent Updates field in the Project Search menu, as shown below...

PROJECT UPDATE

Neoen seeks Narrogin Wind Farm generation licence

Neoen Australia has applied for a generation licence for its approved **Narrogin Wind Farm**, to be located approximately 7km east of Williams and 9km west of Narrogin in the Wheatbelt region of Western Australia, which has all necessary approvals but has yet to officially reach FID.

Detailed design and pre-construction activities are in progress, with construction start scheduled for early Q2 2026 to achieve a Q4 2028 commercial operation date.

The Narrogin Wind Farm will involve the construction and operation of a 168 MW wind farm comprised of 23 turbines, a 100 MW / 200 MWh battery energy storage system and ancillary infrastructure.

It will be located across numerous freehold properties that are primarily cleared for agricultural purposes.

The wind farm will connect into an existing Western Power 220kV overhead line that intersects the southern boundary of the 6344-hectare project area. From there it will be plugged into the SWIS grid.

Bellevue Gold power station 155 hours

5 June

In early May 2026, **Bellevue** Gold achieved 155 consecutive hours of engine-off operations — more than six and a half days running entirely on renewable energy.

This is a significant milestone, not only for the project, but for what is possible in the Australian energy sector and demonstrating nation-leading progress in renewable energy for remote mining operations.

We're proud to support Bellevue Gold on this journey through our 90 MW hybrid power station, which brings together solar (27 MW), wind (24 MW), battery storage (15 MW / 33 MWh) and thermal backup.

The system is designed to meet at least 80% of site energy needs from renewables, and moments like this show what that looks like in practice — especially with the right weather conditions.

It is another step forward in Bellevue Gold's journey as the world's first net zero (Scope 1 and Scope 2) emission gold mine.

Source: Zenith Energy

Avenis Energy advances planning for two BESS projects

Avenis Energy has applied for a state planning permit for its proposed **Grahamvale BESS**, which will have a capacity of 480 MW with 4-hours (1920 MWh) of storage.

The project site is on private land, approximately 5km north-east of Shepparton CBD, within Victoria's Central North Renewable Energy Zone.

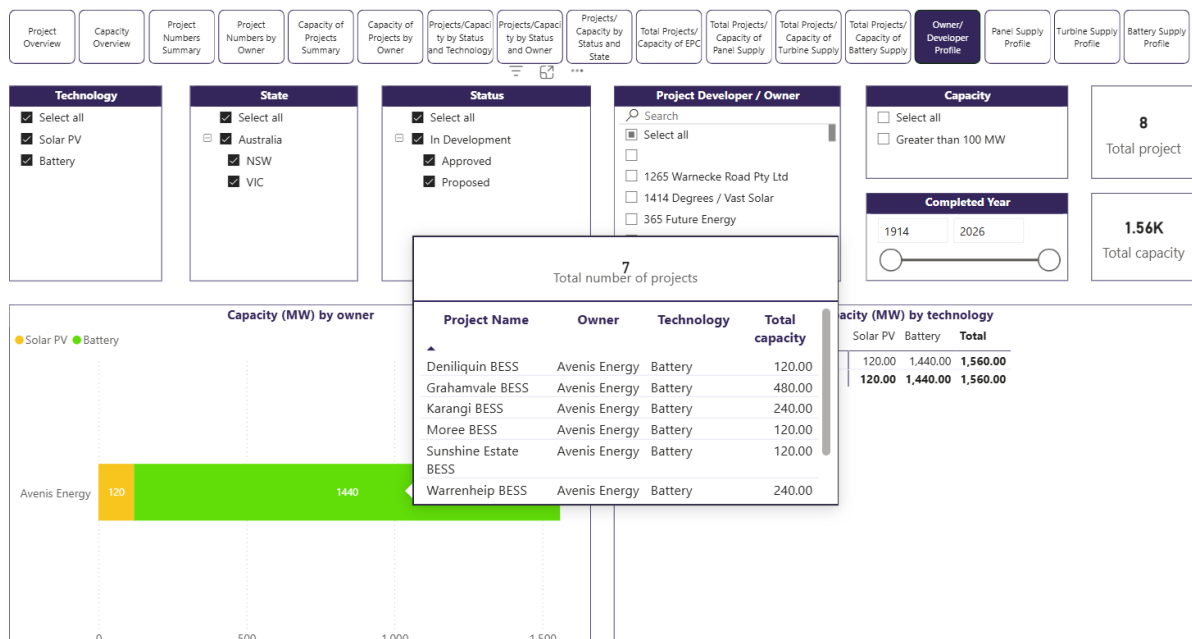

The BESS will connect directly into the 220kV Shepparton Terminal Sub-station located west of the project site on an adjacent property.

During the construction phase an estimated 120-180 workers will be required, with at least four ongoing full-time roles required for the 50-year lifetime of the BESS.

In NSW, Avenis's proposed **Sunshine Estate BESS**, to be constructed on private land approximately 3km south-west of North Rothbury, has been placed on public exhibition by the state planning authority.

The 120 MW / 480 MWh BESS project will be located on a development site of approximately 10 hectares and connect directly into Ausgrid's 132kV Rothbury sub-station, located to the south-east on an adjacent site.

The project is expected to require a workforce of up to 90 at the peak of construction with 1-2 ongoing operational roles.

PROJECT UPDATE: WRESST, VIC

Celero Infrastructure is seeking state planning approvals for its Winton Renewable Energy Stability and Storage Terminal (**WRESST**) project, to be located adjacent to the existing Glenrowan Terminal Station in Winton, Victoria.

An underground transmission line will connect the 400 MW / 1600 MWh project to the Terminal Station.

WRESST is expected to create approximately 100-150 jobs during construction and 4-6 ongoing operational roles, with priority given to local and regional businesses and contractors where possible.

Advancing clean energy and climate cooperation at Bonn climate meeting

7 June

Australia's influential role in global climate change and energy security negotiations continues this week, as Minister for Climate Change and Energy Chris Bowen leads negotiations during the Bonn climate change conference in Germany.

This year's meeting in Bonn comes amid the world's worst fuel crisis but also record renewable generation.

The conflict in the Middle East is increasing momentum worldwide to accelerate clean energy and electrification across transport, construction and industrial sectors, so that nations are better shielded from future global energy shocks.

During his visit, he will progress action on energy security, clean energy and climate change. At the meeting, Minister Bowen will hold talks with countries such as Canada, the United Kingdom and Korea to drive further cooperation on electrification, clean energy investment, modernising grids, fuel security and improving energy storage.

While in Germany, the Minister will also visit Europe's largest commercial sustainable aviation fuel (SAF) production site, INERATEC e-fuels facility, to see how the Albanese Government's \$1.1bn investment in low carbon liquid fuels can help Australia harness the economic and industrial benefits of the energy transition.

At the Bonn climate change conference, Minister Bowen will work with our Pacific counterparts to raise the existential impact of climate change, ahead of Pre-COP in October in Fiji and Tuvalu.

Minister Bowen said Australia's leadership role in climate negotiations and ongoing participation in international conversations about energy security were more important than ever.

Source: Federal Government

The full announcement is available at: <https://minister.dcceew.gov.au/bowen/media-releases/advancing-clean-energy-and-climate-cooperation-bonn-climate-meeting>

Federal first, state approvals to follow for Pinecrest BESS

The federal DCCEE has decided Banpu Energy Australia's **Pinecrest BESS** project in New South Wales is not a controlled action.

Located near Lidsdale, approximately 12km north-west of Lithgow, the project will cover an area of 14.5 hectares, including ancillary infrastructure, within a total project area of 262ha of land owned by Banpu subsidiary Centennial Coal, within the City of Lithgow LGA.

Subject to agreement with Transgrid, the BESS will connect to the network via cut-in to either of the adjacent 132kV or 330kV transmission lines.

An underground or overhead transmission line of up to approximately 150m length will be required to connect the BESS to the transmission lines.

The project area was previously identified as the site of the 100 MW AC / 130 MW DC Pinecrest Solar Farm which was withdrawn prior to SEARs being granted. The Pinecrest Solar Farm is no longer under development.

Banpu Energy Australia has yet to lodge an EIS for Pinecrest BESS to the state planning authority.

Plans to place wind turbines at new Invercargill industrial park, NZ

Property developer Calder Stewart is planning to power a new industrial park Awarua Quadrant, to be built on the outskirts of Invercargill in New Zealand's Southland region, with renewable energy.

As well as rooftop solar, Calder Stewart intends to construct and operate an up to 7-turbine, 42 MW wind farm on a 500-hectare site zoned for heavy industry under the Invercargill City District Plan.

The **Awarua Quadrant Wind Farm** project will supply electricity to the industrial park, with any surplus power available to the general community via connection to the local lines network.

Calder Stewart said "Awarua Quadrant aims to be a catalyst for the growth of the local primary industry and the value-add sectors as well as burgeoning local industries such as technology, aquaculture, and renewable energy".

Another Aotearoa wind project we've added to the database is Ventus Energy's proposed **Mamaku Wind Farm** to be located within pastoral farmland south of Mamaku township, in the Bay of Plenty/Waikato regions.

Consent planning has started for a 21 X 8 MW-turbine project, for a total capacity of 168 MW, to be constructed in two phases.

Phase I will produce approximately 546,000 MWh of renewable electricity each year.

Grid connection will be via the Tarukenga-Lichfield circuit.

Consultation underway for Good Night One, Queensland

Singapore-headquartered InnoGreen Energy is planning a solar farm and BESS project in Queensland's Wide Bay Burnett Region.

The **Good Night One Solar and Battery Storage Farm** will have a capacity of 160 MW solar, together with a 200 MW BESS.

A Powerlink 275kV transmission line crosses the site via an existing power easement.

Construction of Good Night One is planned to begin in 2026 and take approximately two years, with a peak workforce of 200 required. The project value is \$600 million.

Community consultation has started to produce a social impact assessment and community benefit agreement.

Developer InnoGreen Energy, whose head office is in Singapore, has developed renewable energy projects with a capacity of approximately 1.7 GW in Australia, Vietnam, Philippines, Bangladesh, South Korea, Taiwan, Kazakhstan, Spain, Chile, Colombia and other countries.

Lodestone selects Hawke's Bay to launch virtual rooftop solar power plan for homes and businesses

9 June

Solar retailer Lodestone Energy has chosen Hawke's Bay, where its sixth solar farm will be located, as the perfect region to enter the residential market and launch its virtual rooftop solar product for homes and small businesses.

Previously only available to commercial customers, Lodestone's virtual rooftop solar product will now give Hawke's Bay residents access to the benefits of solar power without needing panels on their own property.

The Hawke's Bay solar farm is being constructed in partnership with local lines company Centralines and will produce enough electricity to power the equivalent of 7,000 local homes and businesses.

Gary Holden, Managing Director Lodestone says "We are delighted to be part of this important project, and the partnership with Centralines is a great example of how two like-minded companies can bring these projects to life and benefit the local community. Local generation is the future, and our vision of seeing a solar farm in every community has taken another step forward."

What makes this farm particularly special is that this new solar generation will provide the energy for Lodestone's new residential and small business power product, the EASY Plan.

Lodestone has adapted its commercial contract to enable Hawke's Bay customers including renters, apartment residents, and those unable to install rooftop systems, access to the benefits of local energy.

Source: Lodestone

The full announcement is available at: <https://lodestone.co.nz/new-retail-offering-coming-to-hawkes-bay/>

Richmond Valley project secures grid connection

5 June

Ark Energy has secured approval to connect its hybrid **Richmond Valley** Solar Farm & Battery Energy Storage System (BESS) project to the National Electricity Market (NEM).

The project, to be located in northern New South Wales (NSW), has received its 5.3.4.A/B letters confirming it meets Generator Performance Standards and has approval from the Australian Energy Market Operator (AEMO) and transmission network service provider Transgrid, to connect to the local 330 kV network via its to be constructed Richmond Valley Switching Station.

The grid connection approval follows rigorous testing that included design adjustments, power system modelling, hundreds of simulations, network studies and workshops.

The industry-leading project will incorporate grid-forming inverter technology and be one of the first hybrid solar and BESS projects in the NEM with a single point of connection.

Ark Energy CEO Michael Choi said receiving grid connection approval was a significant milestone.

“We are thrilled to secure grid connection for the Richmond Valley Solar Farm & BESS. This is a huge achievement and takes us closer to reaching financial close on the project, and our goal of breaking ground in the coming months.

Source: Ark Energy

The full announcement is available at: <https://arkenergy.com.au/news/grid-connection-milestone/>

CATL to supply 2,400MWh of battery storage for Smoky Creek and Guthrie's Gap Solar Power Stations in Australia

9 June

CATL will supply battery energy storage systems for Edify Energy's **Smoky Creek and Guthrie's Gap** Solar Power Stations in Queensland, Australia—a 600MW hybrid solar and battery energy storage power station comprising 720MWp solar and 2,400MWh of battery storage. This strategic collaboration marks a significant milestone in deploying large-scale technology to support regional net-zero targets.

Located north of Biloela, the Smoky Creek and Guthrie's Gap Solar Power Stations consist of two independent 300MW generating units: the Smoky Creek Solar Power Station (SCSPS) and Guthrie's Gap Solar Power Station (GGSPS), both connecting to the Powerlink network at 275kV.

To ensure maximum network resilience, the project will utilise CATL's advanced energy storage solutions integrated with cutting-edge grid-forming inverters employing a reverse DC-coupled hybrid configuration.

By delivering highly reliable, dispatchable renewable energy to the local network, these projects establish a new benchmark for utility-scale firm renewables and accelerates the decarbonisation of Australia's energy infrastructure.

Source: CATL

Converting ACT's waste into 24/7 electricity—and the switch is almost ready to flick

9 June

At **Mugga Lane** in Canberra, we're thrilled to share that the hard yards are complete. As soon as the final approval to connect is given, we can turn this full project on!

This new 12MW / 24MWh battery storage system is ready to soak up electricity when it's not needed, then dispatch it into the market during peak demand when the ACT grid needs it most.

This is what smart, dispatchable clean energy looks like. Our existing landfill biogas facility captures and converts methane into reliable renewable electricity—now paired with onsite battery storage to make the system even more flexible, reliable, and valuable for our nation's capital.

- The power generators are built.
- The batteries are in place.
- The project is ready.

What happens next is another chance for the ACT Government to lead. By working together with network operators, market bodies, and regulators, we can unlock this asset faster and let it support homes and businesses across the Territory today.

- For investors: this is a strong example of execution, asset expansion, and long-term value creation.
- For the ACT: it's another step toward a cleaner, more resilient energy future that's already on the ground, waiting to be switched on.

Here's to seeing partners like Evoenergy ACT and Australian Energy Market Operator (AEMO) help bring this to life, so the community and the rest of Australia can see what's possible when innovation and approvals move at the same pace.

Source: LGI

NEW PROJECT: Euleilah Solar Farm and BESS, QLD

Location: Euleilah, Queensland

Capacity: 360 MW solar / 300 MW BESS

Developer: OX2

Status: Early planning stage

Description: The Euleilah Solar Farm and Battery will feature a solar farm of up to 360 MW and a battery energy storage system of approximately 300 MW across a project area of approximately 550 hectares. The site is approximately 12km north of Rosedale, 60km north-west of Bundaberg and approximately 90km south-east of Gladstone, on private land. The project will connect to the grid via a switching station linked to the existing Gin Gin to Wurdong 275kV transmission line. A new overhead line will be required to connect the project to the existing network. The project is expected to create approximately 300 construction jobs and six ongoing operational roles. The project is in the early planning stage, with a development application expected to be lodged in 2027. If approvals are secured, construction could begin in 2028, with operations targeted by the end of 2030.

Securing Affordable Energy: LNG to keep the lights on and protect jobs

9 June

New Zealand households and businesses are a step closer to relief on their power bills and greater energy security, as the Government takes the next step to deliver a liquefied natural gas (LNG) import facility, Energy Minister Simeon Brown says.

- Taking pressure off power bills: Up to \$800 million a year in potential savings flowing through to Kiwi households and businesses from reduced dry year risk.
- Secure energy: Dry-year cover to keep the lights on when the sun isn't shining, the wind isn't blowing, and the lakes are low.
- Funding it right: The Government is working through how the LNG import facility will be paid for – it will not be funded by a levy on power bills.
- Next steps: The Government is progressing two providers to a Request for Proposal (RFP) to deliver an LNG import facility.

"The previous Labour Government failed to secure New Zealand's energy supply, and Kiwis are paying the price every time they open their power bill.

"This Government's focus has been on turning this around by securing New Zealand's energy supply to keep the lights on and take the pressure off power bills.

Source: NZ Government

The full announcement is available at: <https://www.beehive.govt.nz/release/securing-affordable-energy-lng-keep-lights-and-protect-jobs>

NEW PROJECTS

European Energy builds solar portfolio in Queensland

European Energy has released more detail about its proposed **Blenheim Solar Farm**, planned for a site located approximately 10km southwest of Laidley in Queensland's Lockyer Valley.

The project will have a solar capacity of approximately 300 MW and includes an associated battery, providing enough energy to power more than 100,000 homes each year.

The overall project site covers 380 hectares and plans are to continue sheep grazing on the land.

Grid connection, targeted for 2027, will be via the 275kV Greenbank to Middle Ridge transmission line that crosses the project site. A new 275kV switch yard will be built within the project footprint to cut into this line.

A grid connection inquiry was lodged in October 2023, and a development application will need to be submitted to the Lockyer Valley Regional Council.

Also in Queensland European Energy is advancing plans for its 400 MW **Tyrone Solar Farm** near Mount Alma, inland of Gladstone in northern Queensland.

A grid connection inquiry was made in October 2023.

Progress on supercritical geothermal forges ahead

9 June

Another milestone has been reached on the GeoShot NZ project which aims to drill New Zealand's first superhot geothermal well, Regional Development and Resources Minister Shane Jones says.

The Ministry of Business, Innovation and Employment will deliver the project with joint venture partners Mercury NZ and Tauhara North No.2 Trust at Rotokawa Geothermal Field, with New Zealand firm Todd Energy, being selected as the preferred drilling contractor.

"We now have a credible site, expert partners, strong oversight, and a programme that is technically sound and internationally connected," Mr Jones says.

"Cabinet has now approved the release of the remaining \$55m from the \$60m initially ring-fenced in the Regional Infrastructure Fund (RIF). This funding will go to pre-drilling activity and the drilling of a deep exploratory well. This includes securing long-lead equipment, contractors, and completing the work needed to safely drill and test the well.

"Government support is critical to getting this pioneering high-risk but high-reward activity underway.

For further information go to: www.growregions.govt.nz/GeoShotNZ

Source: NZ Government

The full announcement is available at: <https://www.beehive.govt.nz/release/progress-supercritical-geothermal-forges-ahead>

Gamuda Renewables enters Victoria market with solar & BESS project, signalling future data centre opportunities

10 June

Building on the success of its Central Tasmanian energy portfolio, Gamuda Renewable Pty Ltd (Gamuda Renewables) has made its inaugural Victorian investment by acquiring an interest in the **Hazelwood North** Solar Farm and Battery Energy Storage System (BESS) from Manthos Investments Pty Ltd (Manthos). The move increases Gamuda Renewables' Australian portfolio to three assets across the National Electricity Market (NEM) and deepens the commitment to owning and building large-scale renewable energy infrastructure in Australia's most populous energy markets.

The Hazelwood North Solar Farm and BESS project is an approved 450 MW hybrid solar and battery energy storage project spanning 1,100 hectares in Latrobe Valley, Victoria. The project is designed to pair up to 450 MW of solar generation with a 4-hour (1,800 MWh) battery energy storage system. When operational, the project is expected to power approximately 150,000 homes. With Development Approval already secured through Victoria's Development Facilitation Program, the project is set to enter construction in 2028 with commercial operation expected in 2030, pending a final investment decision (FID).

The project will create approximately 450 local construction jobs — a meaningful economic contribution to a region with a proud industrial heritage and a workforce well-placed to play a central role in Australia's energy future. For Gamuda Renewables, the Hazelwood North project

represents a significant investment in Victoria, and the team is committed to ensuring its benefits are felt across the local community.

“This project brings together Gamuda Renewables’ capabilities, the Valley’s energy assets, and an expanding Data Centre presence to create something truly significant — a sustained economic uplift for the Latrobe Valley and its surrounding communities, now and well into the future.” — George Labros, Manthos.

The acquisition reflects the pace at which Gamuda Renewables has scaled since entering the Australian energy market in September 2024. Setting an initial target of 1–2 GW by 2029, the company achieved that goal in just under two years — and has since set its sights considerably higher, with an ambition to reach 5 GW of assets under development, construction, and operation by 2031. That growth trajectory is underpinned by the financial strength and aspirations of its parent company, Gamuda Berhad.

An Exciting Expansion: Data Centre Co-location at Hazelwood North

A key strategic dimension of the Hazelwood North project is its capacity for future expansion. Manthos and Gamuda Renewables are actively exploring an expansion of the project to include a co-located data centre on site — a prospect that aligns naturally with the growing convergence of renewable energy and digital infrastructure, and with Victoria’s own ambitions to attract world-class data centre investment to the state.

What makes this opportunity particularly compelling is Gamuda Renewables’ utility-neutral approach, in which a co-located data centre could be powered directly by on-site solar and BESS, operating with greater independence from the wider distribution network and leveraging the BESS as a “shock absorber” during periods of low and high demand.

This model reduces pressure on shared transmission infrastructure and offers data centre operators a genuinely differentiated proposition — clean, dedicated, reliable power, built and managed by the same team that constructed the asset.

Jarred Hardman, Chief Strategy and Development Officer at Gamuda Renewables, said: “Hazelwood North marks a significant milestone for us — not only as our first Victorian asset, but as a project that captures exactly where the energy transition is heading. The opportunity to expand the project to include a data centre is something both Manthos and our team are genuinely excited about. Pairing large-scale renewable generation and storage with the digital infrastructure that increasingly depends on it is a compelling model, and one we look forward to progressing in the months ahead.”

Supporting Victoria’s Renewable Energy Future

The project sits squarely within Victoria’s broader clean energy ambitions, supporting the state’s targets of 65 per cent renewable energy by 2030 and 95 per cent by 2035, as the government works toward net-zero emissions by 2045. The Allan Government’s decision to grant planning approval in September 2024 through the expedited Development Facilitation Program pathway reflects the state’s commitment to accelerating high-quality renewable projects — and Gamuda Renewables is proud to be delivering one of them.

The acquisition is subject to approval from the Foreign Investment Review Board (FIRB).

Source: Gamuda Australia

Record investment drives CopperString with works underway

10 June

- The Crisafulli Government's 2026-27 Budget to deliver record \$3.2 billion CopperString investment.
- Ground broken at Flinders Substation with early works progressing on Eastern Link after years of delays and billions of dollars in blowouts under the former Labor Government.
- The Crisafulli Government is delivering a plan for Queensland's future and a better lifestyle through a stronger economy after a decade of decline under Labor.

The Crisafulli Government has further strengthened its commitment to CopperString by delivering a record \$3.2 billion investment for the project in the upcoming State Budget.

Works are also progressing after years of delays under the former Labor Government, with ground broken this week at the Flinders Substation near Hughenden, ahead of bulk earthworks commencing next month.

The Crisafulli Government has budgeted \$420 million in funding in the 2026-27 Budget, as part of a total \$3.2 billion investment to support construction activities for the Eastern Link as well as enabling works for the Western Link, including through the North West Energy Fund.

This record investment is an \$800 million increase on last year's Budget of \$2.4 billion which underpinned the Crisafulli Government's commitment to ensuring the Eastern Link is completed by 2032.

EnergyConnect powers up as clean energy transition forges ahead

10 June

Australia's largest transmission project is being fully energised following completion of construction, bringing lower power costs one step closer for millions of consumers in three states and advancing the nation's renewable energy transition.

The critical EnergyConnect project increases renewable energy sharing between NSW, Victoria and South Australia, providing access to lower-cost wholesale energy as NSW's coal-fired power stations progressively retire.

Transgrid and its delivery partner Elecnor Australia have completed construction of the 700km NSW section of the essential interconnector, with more than 1,500 towers and over 10,000km of high-voltage conductor.

Source: Transgrid

The full announcement is available at: <https://www.transgrid.com.au/media-publications/news-articles/energyconnect-powers-up-as-clean-energy-transition-forges-ahead/>

Submissions invited on Sundown Solar Farm

10 June

The community is invited to make written or verbal submissions to the NSW Independent Planning Commission (Commission) about a State significant development application (SSD-8911) lodged by **Sundown Solar** Pty Ltd to develop a solar farm located approximately 30 kilometers east of Inverell in the New England Tablelands region of NSW.

The proposed development in the Inverell Shire Council local government area includes a 360 megawatt (MW) solar farm, a 150 MW battery energy storage system (BESS) and associated infrastructure.

The Department of Planning, Housing and Infrastructure (Department) has completed its whole-of-government assessment and has referred the application to the Commission for determination. The Commission is the consent authority because the Department received more than 50 unique submissions objecting to the application.

Commissioners Sarah Dinning and Michael Wright have been appointed by the Commission Chair to determine the application.

Source: NSW IPC

The full announcement is available at: <https://www.ipcn.nsw.gov.au/news/submissions-invited-sundown-solar-farm-0>

Mitsubishi HC Capital and Brookfield partner to launch renewable energy company

10 June

Mitsubishi HC Capital Inc. ("Mitsubishi HC Capital") and Brookfield Asset Management Ltd. ("Brookfield") today announced the formation of a joint venture for a privately held renewable energy company (the "JV") that will acquire and operate a diversified portfolio of contracted, operating renewable energy assets in Europe.

The seed portfolio comprises approximately 570 megawatts of installed capacity diversified across the U.K., Spain, Sweden, Finland, France and Ireland, with an equity value of approximately EUR 400 million. The assets are highly contracted under longterm power purchase agreements, which have a weighted average remaining term of approximately 10 years. Collectively, the assets offer a highly stabilized cash flow profile, generating predictable income with strong downside protection and resilience across market cycles.

The JV is also evaluating potential future acquisitions of additional renewable energy assets in Europe and Australia. Future acquisitions are expected to focus on stabilized operating assets, including onshore wind, utility-scale solar, and battery energy storage, underpinned by attractive commercial arrangements consistent with those of the seed portfolio.

Source: Mitsubishi HC Capital

The full announcement is available at: <https://www.mitsubishi-hc-capital.com/english/news/newsroom.html>

\$225 million South West REZ investment to secure NSW energy future

10 June

The Minns Labor Government will invest \$225 million in the 2026 NSW Budget to bring more low-cost renewable energy into the grid, helping put downward pressure on electricity bills while delivering investment, jobs and community benefits across the state's south west.

The investment will support critical grid upgrades for the South West Renewable Energy Zone (REZ), allowing four new wind, solar and battery projects to connect to the electricity system as ageing coal-fired power stations retire.

Together, these projects could generate enough electricity to power around 1.6 million NSW homes each year, helping to secure our state's energy future.

The South West REZ is one of the state's most important energy projects, designed to strengthen electricity reliability, unlock new private investment and deliver affordable energy for NSW homes and businesses. The Minns Labor Government is taking action to fund the infrastructure needed to realise the potential of the REZ, after the previous Liberal National Government didn't prioritise its delivery.

Planning is at an advanced stage, but critical works are needed to maximise what NSW consumers get out of the REZ. This investment will enable the extension of the 500 kilovolt transmission network through to Dinawan substation, through a range of activities including:

- Appointment of early works contractors.
- Progression of project development and design.

A great milestone to celebrate at Kōwhai Park solar farm

11 June

Recently, we marked the installation of the final panel at our solar farm at **Kōwhai** Park. Now, around 300,000 panels are in place across the 230 hectare site – a huge effort from everyone involved to reach this point!

The 170MWdc/150MWac project will be one of New Zealand's largest solar farms and generate enough renewable electricity to power around 36,000 homes each year.

Kōwhai Park is a joint venture with our partner Lightsource bp, located at Christchurch International Airport Limited, and it's exciting to see the project taking shape at this scale.

With the panels in place, there's a bit more work to do before the solar farm is operational later this year.

Sembcorp Industries completes acquisition of Alinta Energy

11 June

- Adds high quality and scalable Australian gentailing platform with 3.4GW operating portfolio and 10.4GW development pipeline
- Anchors Australia as a key market to drive growth and support energy transition

Sembcorp Industries (Sembcorp) today announced that its indirect wholly-owned subsidiaries, Sembcorp Energy Australia Pty Ltd and Sembcorp Energy Australia Pte Ltd, have completed the acquisition of shares in Pioneer Sail Holdings Pty Ltd and Latrobe Valley Power (Holdings) Pty Ltd. This completes Sembcorp's previously announced acquisition on December 11, 2025, of a 100% stake in Alinta Energy Pty Ltd (Alinta) from Chow Tai Fook Enterprises Limited, which had owned Alinta since 2017.

With the completion, Sembcorp will integrate a scalable platform in Australia that includes Alinta's 3.4GW operating portfolio and 10.4GW development pipeline with Sembcorp's global capabilities in delivering comprehensive energy solutions. Alinta will continue to operate under its existing brand and operating structure to ensure continuity for key stakeholders including its more than 1,000 employees, around 1.1 million customers and partners across Australia. Sembcorp will retain Alinta's management team led by Managing Director & CEO Jeff Dimery and his leadership team.

Cook Labor Government to help develop Collie green steel mill

11 June

- Cook Labor Government to invest \$9.8 million in Generation Steel
- Funding to support next phase of development of proposed green steel mill in Collie
- Part of government's Just Transition for Collie and Made in WA plan
- Cook Labor Government diversifying the economy so it remains strongest in the nation

The Cook Labor Government will invest \$9.8 million in Generation Steel - formerly known as Green Steel of WA - to progress plans for Australia's first low-emissions steel mill and Western Australia's first steel recycling mill in Collie.

The funding will help deliver the Cook Labor Government's Made in WA plan, which will help ensure the State's economy remains the strongest in the nation by making more things here.

Allocated from the \$230 million Collie Industrial Transition Fund, the funding unlocks Generation Steel's next stages of development for the steel mill project and marks a significant milestone in Collie's transition.
